- NCERT Class 7 — Our Environment, Chapter 9: Life in the Temperate Grasslands
- NCERT Class 7 — Our Environment, Chapter 10: Life in the Deserts

Core Factual & Conceptual Architecture

1. Tropical Equatorial Life in the Amazon Basin

- Equatorial Setting: Located between 10 degrees north and south, drained by the Amazon River and its countless tributaries, forming the world's largest river basin.
- Rainforest Ecology: Hot and wet year-round with daily rainfall. Dense canopies keep the ground dark, supporting shade-tolerant species like orchids and bromeliads.
- Indigenous Subsistence: Practices slash-and-burn agriculture, growing manioc (cassava), sweet potato, and maize. Houses include traditional beehive huts and large Maloca apartments.

2. Subtropical Ganga-Brahmaputra Basin

- Basin Structure: Spans the Indo-Gangetic plains, Himalayan foothills, and the Sundarbans delta, characterized by monsoon climate and extremely high population density.
- Agriculture & Wildlife: Dominant cultivation of paddy, wheat, jute, and tea. Notable fauna includes the one-horned rhinoceros and the endangered freshwater blind Susu dolphin.
- Urbanization Pressures: Industrial and municipal waste discharge into major rivers has triggered extensive pollution, addressed through conservation programs like Namami Gange.

3. Temperate Grassland Economies

- North American Prairies: Flat, treeless plains with continental extremes and Chinook winds. Highly mechanized, technology-driven agriculture makes it the granary of the world.
- South African Velds: Rolling plateaus with mild climates, featuring Merino sheep rearing for wool, cattle ranching, and rich mineral deposits like gold in Johannesburg and diamonds in Kimberley.

4. Hot Deserts: The Sahara

- Geographic Extent: The world's largest hot desert covering 8.54 million square meters across 11 nations in North Africa, featuring sand dunes, gravel plains, and rocky plateaus.
- Oases & Nomadic Life: Subterranean water emergence creates fertile oases supporting date palms and agriculture. Nomadic groups like Bedouins and Tuaregs practice pastoralism.

5. Cold Deserts: Ladakh

- High-Altitude Environment: Located in the Great Himalayas in a rain-shadow zone, experiencing extreme cold, dry air, and intense solar radiation.
- Economy & Culture: Subsistence agriculture of barley and potatoes, yak rearing, and rich Buddhist cultural heritage centered around gompas like Hemis and Thiksey.
